

I am a truck driver. I am out 48 weeks a year so i have bought a xm raido to lisen to while i am out . It has come in handy alot of times when it came to what the weather was doing in the state i was in at the time and also what was going on with road and traffic.I do not think that it is right for anyone to try to stop the xm raido from broad casting this . were is our rights to know what is going on up ahead of us?You people talk about the dangers a truck can be so now some of us are trying to stay on top of the problem and now this is in the works to be taken away. why?
